

RestClient

1- Create RestClientController

```
RestClientConfig.java ProviderRestClient.java RestClientController.java X
1 package com.demo.consumer.restclient;
2
3 import org.springframework.web.bind.annotation.GetMapping;
4
5 @RestController
6 @RequiredArgsConstructor
7 @RequestMapping("/api/rest-client")
8 public class RestClientController {
9
10     private final ProviderRestClient providerRestClient;
11
12     @GetMapping("/instance")
13     public String getInstance() {
14         // RestClient restClient = RestClient.create();
15         // String response = restClient.get()
16         //     .uri("http://localhost:9091/instance-info") // end url
17         //     .retrieve() // request
18         //     .body(String.class); // convert to our class
19         // return response;
20         return providerRestClient.getInstanceInfo();
21     }
22 }
```

2- Create spring bean

```
RestClientConfig.java X ProviderRestClient.java RestClientController.java
1 package com.demo.consumer.restclient;
2
3 import org.springframework.context.annotation.Bean;
4 import org.springframework.context.annotation.Configuration;
5 import org.springframework.web.client.RestClient;
6
7 @Configuration
8 public class RestClientConfig {
9
10     @Bean
11     public RestClient restClient() {
12         return RestClient.builder()
13             .baseUrl("http://localhost:9091")
14             .build();
15     }
16
17 }
```

3- Create provider

```
RestClientConfig.java ProviderRestClient.java X RestClientController.java
1 package com.demo.consumer.restclient;
2
3 import org.springframework.stereotype.Service;
4 import org.springframework.web.client.RestClient;
5
6 import lombok.RequiredArgsConstructor;
7
8 @Service
9 @RequiredArgsConstructor
10 public class ProviderRestClient {
11
12     private final RestClient restClient;
13
14     public String getInstanceInfo() {
15         return restClient.get()
16             .uri("/instance-info")
17             .retrieve()
18             .body(String.class);
19     }
20
21 }
```

<http://localhost:9090/api/rest-client/instance>
